IN THE SPECIFICATION

Please replace paragraph [0090] with the following amended paragraph:

[0090]   It is noted that, when the wand (or tool) is utilized, the program at the PC may recognize this and merely input the user ID in the [[want]] wand (or tool) ID field. Alternatively, the mere receipt of a user ID in association with product code information will trigger the ARS 308 to assume that the [[want]] wand 1600 was utilized. It is only important that the use of the [[want]] wand (or tool) be recognized and that the user's PC be routed to a location on the network preassociated with that wand (or tool) distributor. Further, it is the routing of the user's PC to a predetermined location on the network based upon the use of a particular tool, a particular type of tool or a general class of tools that elicits the connection. For example, it would be that the network connection is made in response to the [[suer]] user utilizing a bar code scanner. This would connect the user to a website for a general bar code scanner tool. For a disk drive, the program would recognize that a disk drive had been installed (or merely used) and then route the user to the website of the disk drive manufacturer, a competitor of such or even to some marketing firm that wants to contact individuals that use or initiate such a piece of equipment.
